MUTUAL LEARNING SERIES ON DIGITAL HEALTH ECOSYSTEMS

Digital Health interventions through a Health System Lens - preparing for inclusive, integrated and accountable digital health models beyond the pandemic

December 2\textsuperscript{nd} & 16\textsuperscript{th} 2021 | January 19\textsuperscript{th} 2022

While the COVID 19 pandemic has revealed country-level health system gaps, it has also been transformative in being able to fast-track healthcare innovations and trends that have been developing in countries over the last few years. The long-term success of these digital health improvements will ultimately depend on their integration within health systems, their ability to be truly inclusive in reach and coverage, capacity of governments to manage this change and the creation of sustainable new models of care.

This Mutual Learning Series consists of three dialogues to understand the extent to which digital tools have increased/improved access to health services for vulnerable and underserved populations. We explore possible measures to address emerging inequalities, challenges digital health companies face, and capacities governments need to integrate digital technologies beyond COVID. The dialogues are facilitated by the Transform Health Coalition, a global coalition of organizations, individuals and institutions committed to achieving Universal Health Coverage through the equitable use of digital technologies and data.

Session 1
Matters of Inclusivity in Design & Governance of Digital Health in India:
December 16\textsuperscript{th} 2021
The session will explore what it means to take a ‘leaving no one behind’ approach in practice when private and public actors come together to innovate digital solutions to address health challenges in real time.
Participants: A debate between technology pioneers, a state policy maker and a health equity expert

Session 2
Accountability - Regulating India's digital health landscape:
January 19\textsuperscript{th} 2022
Building trust for digital health solutions will come from having robust laws and reliable grievance redressal mechanisms. This session highlights what an ideal legal and regulatory framework should look like that bring out rights and liabilities of all stakeholders concerned for the use of technology across healthcare sectors.
Participants: Legal experts, technologists, ethicists and civil society

Session 3
Scale and Integration:
December 2\textsuperscript{nd} 2021/January 2022
This session will explore some of the emerging lessons for strengthening integrations of digital technologies into health services at scale and sustainability beyond COVID.
Participants: Central and state government policy makers, multi/bilateral agencies
